

University microsatellites: an hands-on educational tool

Massimiliano RONZITTI

**School of Aerospace Engineering
Università degli Studi di Roma "La Sapienza"**

December 2006

2004 6 18

The content of this presentation is the result of □
didactical activity at Scuola di ingegneria
Aerospaziale by Group of Astrodynamics of
University of Rome “La Sapienza” (G.A.U.S.S)

Small Satellites for Space Education

- *Practical Training of Whole Cycle of Space Development*

- Mission conceptualization, satellite design, fabrication, ground test, modification launch and operation

- Know what is important and what is not.

- *Importance for Engineering Education*

- Synthesis (Not Analysis) of an effective system

- Feedbacks from the real world to evaluate design, test, etc.

- *Education of Project Management*

- Four Managements: time, human resources, cost and risk

- **Team work, conflict resolution**

- Effective discussion, documentation

- International cooperation, negotiation, mutual understanding

Shinichi Nakasuka
Department of Aeronautics and Astronautics
University of Tokyo

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

“Hands-on” space education

Objectives

- Improving students training courses
- Stimulating interest and creativity
- Enriching imagination
- Promoting space culture

Methods

- Team work (work together)
- Interactive work (exchange information)
- Multidisciplinary work (have a global view)
space engineering is system engineering
- Practical work (put in practice theoretical knowledge)
- Challenging work (link to the “state-of-the-art” technology and scientific challenges)

A short history of UNISAT program

1990 -Theoretical studies on building low-cost microsatellites at university

A few people trusted it was possible that students could design realize microsatellites using commercial off-the-shelf components)

1995 – First founding of UNISAT program from Italian Minister of University

Building of ground station (SPIV)

researchers from University of Rome at Stanford University

1997 – Starting design and realization of UNISAT

2000 – Launch of UNISAT

2002 – Launch of UNISAT-2

2004 – Launch of UNISAT-3

2006 – Launch of UNISAT-4

I microsattelliti UNISAT

Unisat

26 Settembre 2000

Unisat-2

20 Dicembre 2002

Unisat-3

29 Giugno 2004

Unisat-4

26 Luglio 2006

Spacecraft configuration

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

Solar Arrays

Terrestrial Si solar cell

Lateral solar panels

Upper solar panel

Solar Arrays

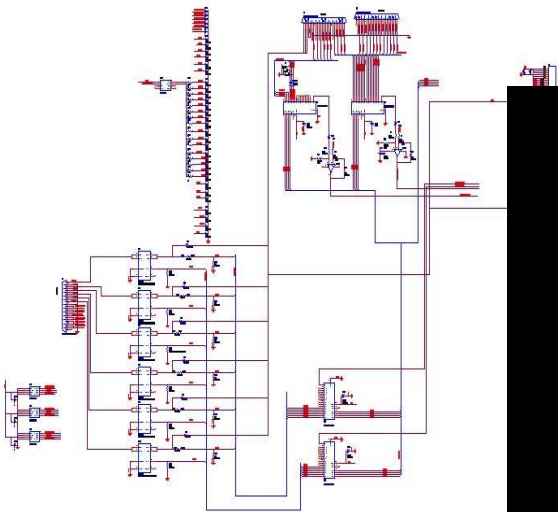

GaAs triple junction Solar Array

**Solar Array made by Kiev
Polytechnic Institute (Silicon)**

Design and realization of electronic boards

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

Electronic boards

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

UNISAT-3 Attitude

Attitude Stabilization

- A permanent magnet installed on the satellite follows the Earth magnetic field lines
- Accuracy on the order of 10°
- Low realization cost
- No software development

Attitude Determination

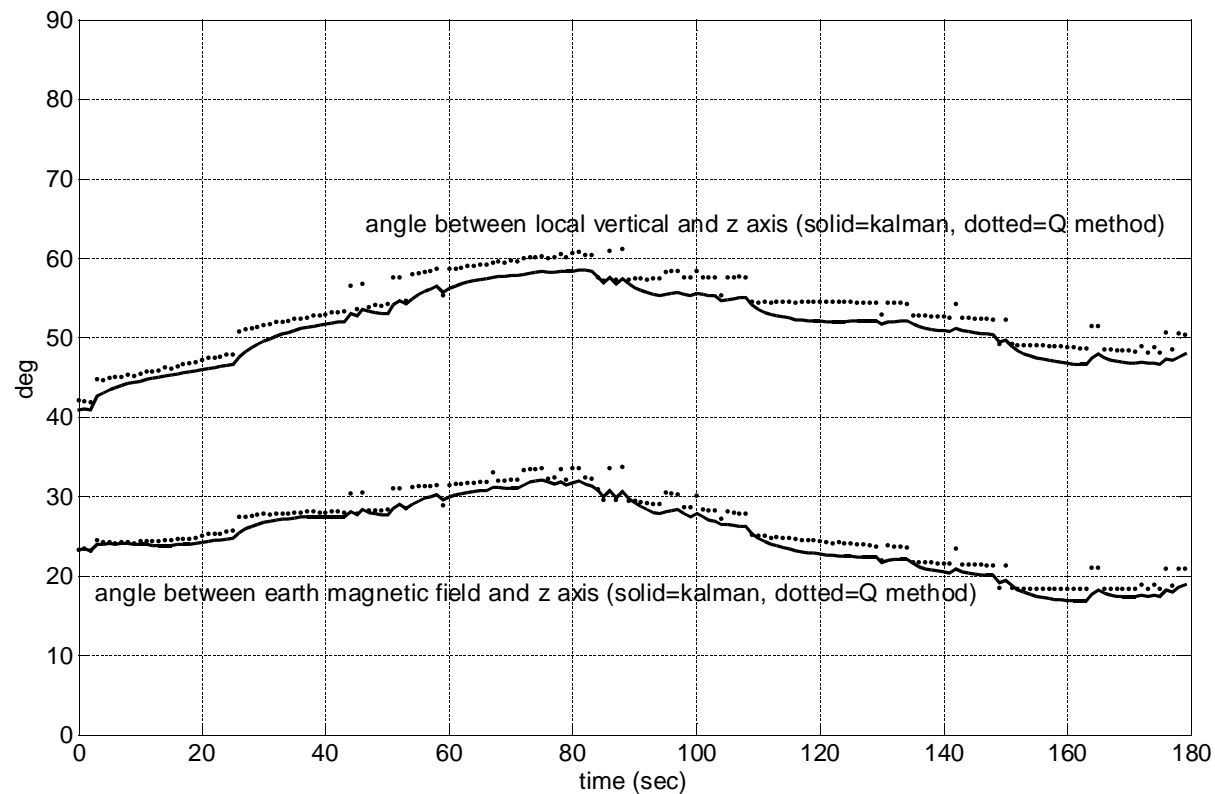

- Attitude sensors:
 - coarse sun sensor (3 solar array currents)
 - 3 axes solid state magnetometer
- Attitude determination achieved by comparison of Sun-Satellite and Geomagnetic field theoretical direction (from ephemeris) with on board measures

UNISAT-3 attitude determination: results

UNISAT-3 Z-Axis angles with respect to Geomagnetic Field and Local vertical

Triple Junction Solar Cells Tests

SUN SIMULATOR

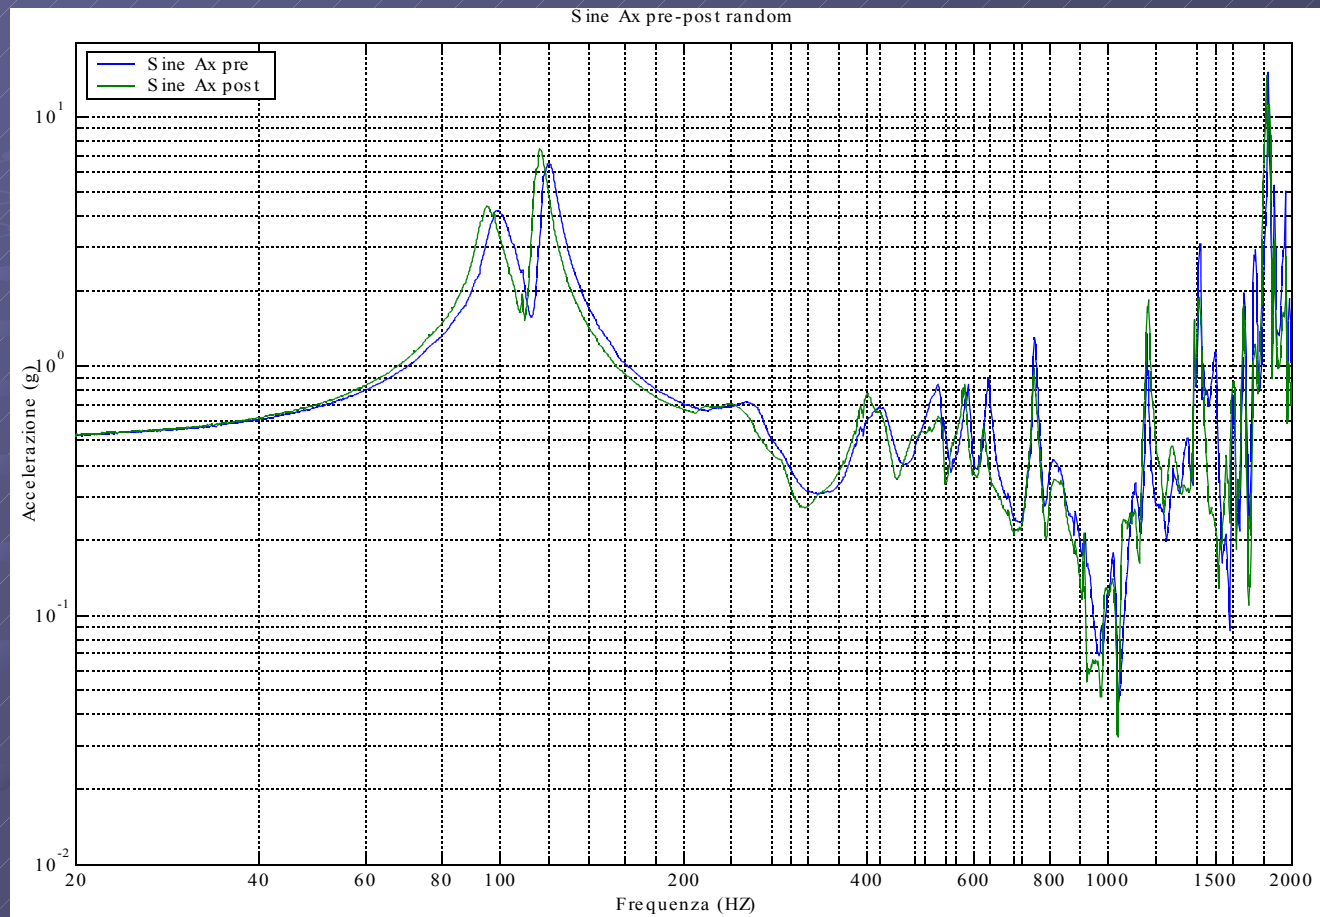

Vibration Test (OCI, Roma)

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

Vibration Test Results

Frequency response before (blue) and after (green) random signal test

Vibration test (Dnepropetrovsk)

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

Separation test (Dnepropetrovsk)

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

Integration on the DNEPR launcher (Baikonour)

UNISAT-3 launch team

Gruppo di Astrodinamica dell'Università degli Studi "la Sapienza"

UNISAT-3 Launch

**Launched from Baikonour
using DNEPR LV
on 29th June 2004**

Sunsynchronous Orbit

Inclination: 98°

Altitude: 710-780 km
